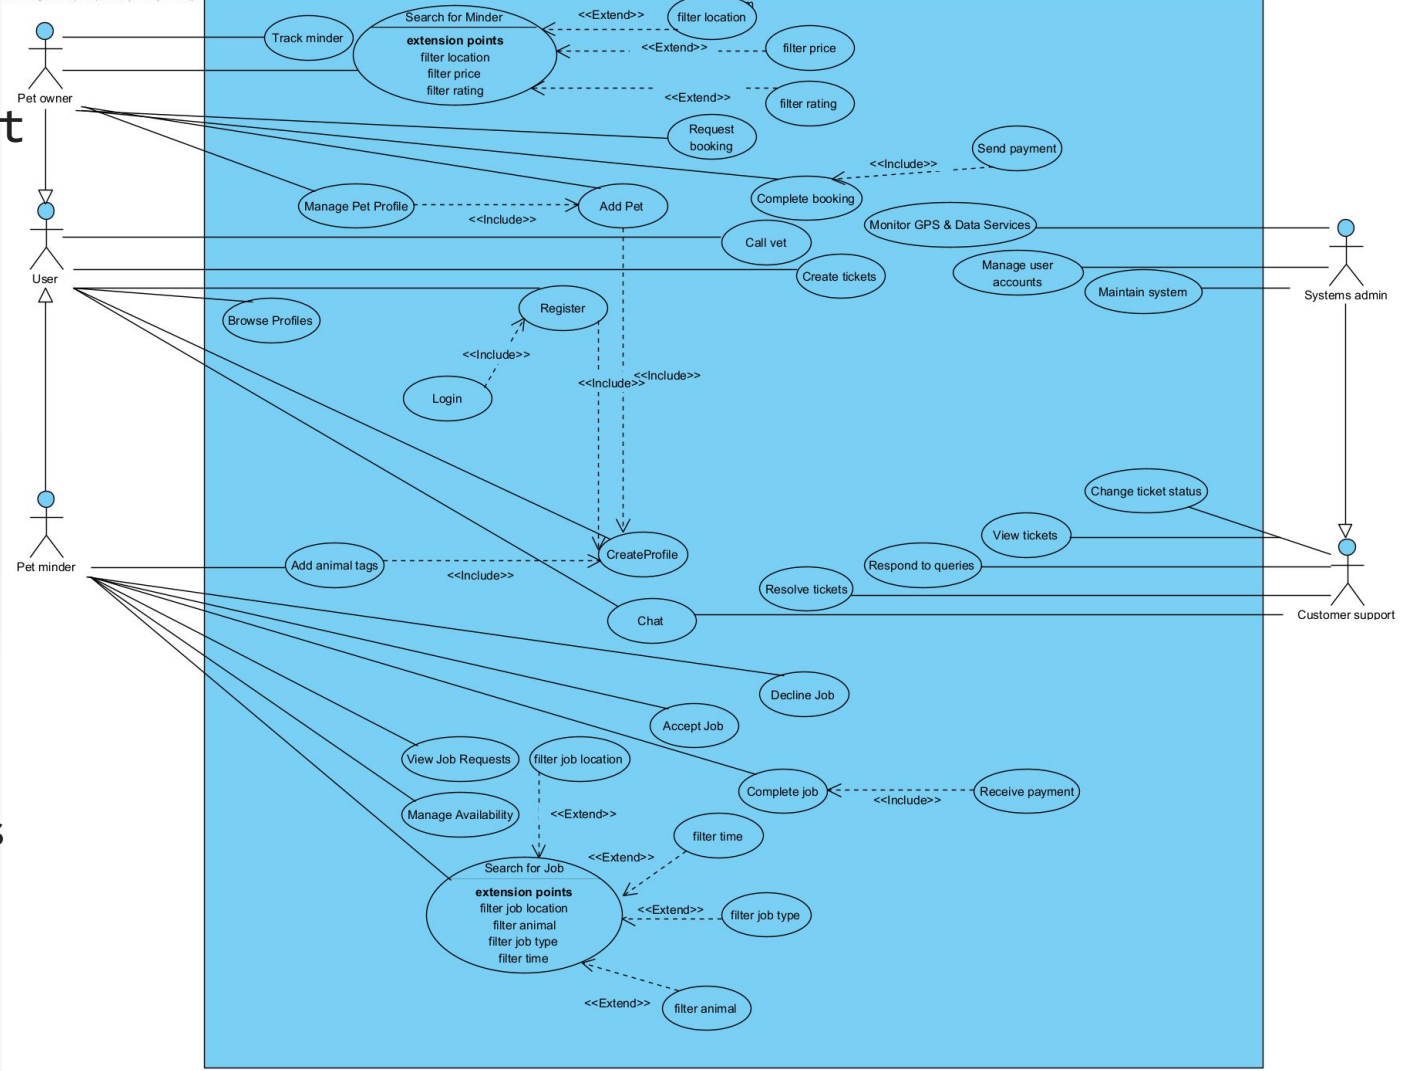
Pet-owner and pet-minder inherit from User, while systems admin inherits from Customer Support.

Key things:

- Booking details
- Payment
- Ticketing system
- Admin services



Key Use Case Description

Use case 1 - Search For Minder
Actor: Pet Owner
Preconditions: Logged in, system online and functional.
Basic Flow: Pet Owner selects search interface, system shows search interface. Pet Owner can select any filter they see, and system will retrieve matches and update the display.
Postconditions: Filtered/Unfiltered results of Pet Minders are shown on displayed.

Use case 2 - Request Booking
Actor: Pet Owner
Preconditions: Pet Owner logged in, system functional, and they have found a Pet Minder to book and has selected their profile.
Basic Flow: Pet owner chooses the booking interface, and system shows times and days where the Minder is available. Pet Owner chooses their preferred date and time and confirms the booking. Pet Minder is sent a notification of the booking.
Postconditions: There is a pending booking request in the system, and the Pet Owner can view their booking details.

Functional RQs owners

- Account & Profile
- Pet Management
- Finding a Minder
- Booking

- **Performance**
  - GPS tracking every 10 seconds
  - User actions within 5 seconds
  - Supports 1000+ users
- **Reliability**
  - Background GPS for IOS and Android
  - 99% system uptime
  - 24/7 backups
- **Usability**
  - Interface follows usability standards
  - Core remain and intuitive

Risk Assessment

Project Scope — Med

- Incomplete essential functions
- Set clear goals, ensure scope doesn’t grow

Inaccurate data — Low/Med

- Inefficient product
- Fact-check and peer review information

Incomplete requirements — Low/Med

- Low-quality product, unfinished work
- Define requirements, review progress

Low motivation — Med/High

- Low-quality product, unfinished product
- Have meetings to ensure group satisfaction

Inconsistent quality of work — Med

- Underdeveloped sections, low-quality product
- Frequent meetings ensuring satisfaction

Delays — Med/High

- Low-quality product, stressed members
- Regular meetings and checkups on progress

Uneven workloads — High

- Overworked members
- Make sure members divide work equally

Ambiguous requirements — Low

- Requirements not integrated properly
- Make requirements feasible at start

Inaccurate Client expectations — Low/High

- Client dissatisfaction
- Clear plans during client meetings

Teammates not doing work — Med/High

- Group tension, unhappy members
- Micro Deadlines, progress meetings

Summary
